Q4 [SPLIT SAMPLE ASKED OF HALF SAMPLE: ACTUAL BALLOT LANGUAGE] Your ballot will include a vote on a state constitutional amendment. The description says: "Provides for improving student achievement and parental involvement through more public charter school options. Shall the Constitution of Georgia be amended to allow state and local approval of public charter schools upon the request of local communities?"

Will you vote "yes" to pass the amendment, or "no," against passing the amendment. (659 LV/3.8%)

LV	
52	Certain to vote Yes
40	Certain to vote No
8	Not Certain at this time

Now I am going to read you the names of a few people and things. For each one, I will ask you to rate them on a scale of 1 to 5, just like how restaurants are reviewed in the newspaper, with 1 being the worst rating and 5 being the best. If you have heard of the person or thing, but have no opinion, that's fine, and if you haven't heard of them that is fine too.

Q9 You may have heard recent debate about whether abortion should be permitted, and in what circumstances. Which of the following comes closest to your view on when abortion should be permitted?

LV	
52	Abortion is a choice that usually should be left to the pregnant woman to decide
30	Abortion should only be permitted in cases of rape, incest and when the life of the
	pregnant woman is in danger
8	Abortion should only be permitted when the life of the pregnant woman is in danger
6	Abortion should never be permitted, even when the life of the pregnant woman is in
	danger
4	Not Sure/Refused

And now we have a few final questions to make sure a representative sample of all voters has been called.

Conducted by 20/20 Insight, LLC

1,316 Likely Voters (2.7% Margin of Error) = LV 450 Congressional District 12 Voters (4.6% Margin of Error) = W1 300 Senate District 6 Voters (5.7% Margin of Error) = W2

Statement of Methodology: 20/20 Insight, LLC surveyed 1,316 Georgia Likely Voters from Oct 29-31, 2012. These interviews were then weighted to representative Georgia Likely voters. The survey's margin of error is +/-2.7% at a confidence level of 95%. 20/20 Insight, LLC conducts surveys using automated interactive voice response (IVR) technology. This is what is often referred to in the media as a "robo poll". Oversamples were conducted in CD 12 and SD 6, those interviews were separated from the full poll and reported on separately.

No live human operators spoke to respondents, who used their touch-tone phones to answer questions. Every respondent heard the exact same prompt for each question, except where noted a computer randomized the order in which they heard questions, ballot choices or names. To keep the average call length to a reasonable amount of time, some questions were read only to a sub-sample or split-sample of respondents. Respondents had up to 5 seconds to answer each question after the full prompt was read, and could answer early at any time once they heard their choice. On average for this survey, respondents spent more than 7 minutes on the phone, and slightly more than 30% of those called who initially agreed to take the survey did not complete it due to dropoff or some other factor.

The frequencies reported in this survey include the weighted results from ONLY the 1,316 modeled respondents who answered every question including the demographic profile.

Additional demographic weighting was applied to the survey using statistical information available from the Georgia Secretary of State and the 2008 Exit Poll for the Georgia General Election available on www.cnn.com. More than 93% of poll respondents had a final weight applied of less than 1.5. A weighting of 1 would mean no weighting was applied. This weighting, and other factors such as refusal to be interviewed may introduce additional error that is more difficult to quantify. 20/20 Insight, LLC employed multiple callbacks over successive days and at different hours during the day and also attempted to convert those who initially decline to participate in order to reduce any respondent bias introduced by only interviewing the subset of the general population that answers a call on any random night. A "raking" weighting methodology was used - first the survey was raked to match Georgia's racial and ethnic population, then the survey was adjusted for age and finally the survey was adjusted for gender.
